

Polarization Filter Set

for Z60F narrow

Z60G004

Part Number

- Ideal for shiny objects
- Quick and easy replacement

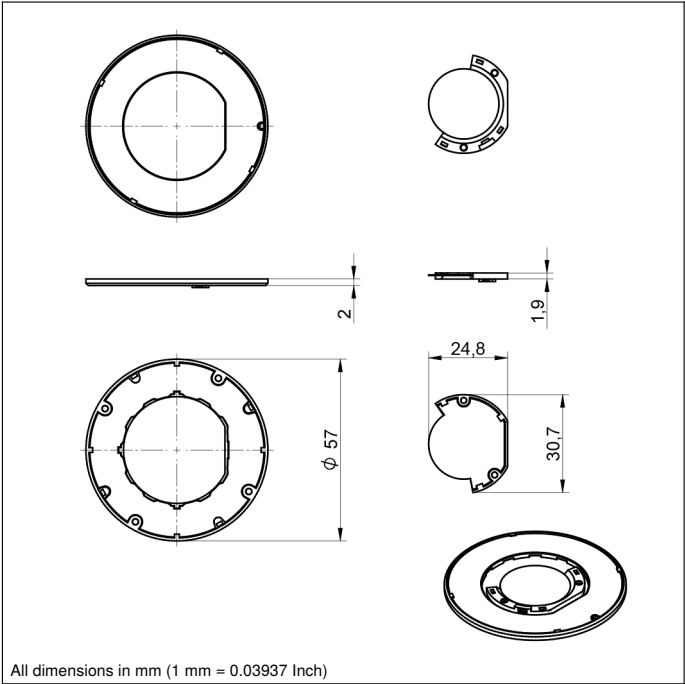

Polarization filters are used to eliminate or greatly reduce reflections. This set includes an illumination filter and optical filter, both of which are fixed in place without the need for tools and, when the protective tube is used, remain perfectly positioned even when cleaning results in vibration or accidental movement.

Technical Data

Optical Data	
Type of polarization	Crossed
Usable wavelength range	400...700 nm
Contrast ratio	9000:1
Mechanical Data	
Mounting type, device-side	Magnet
Material	Plastic, ABS
Optic Cover	Plastic
Scope of delivery	1 × light filter, 1 × lens filter
