

Fiber-optic amplifier

P1XD134

Part Number

- Intuitive setup using display
- LED blue light
- NFC communication via the weCon app and IO-Link
- Tool-free assembly

Fiber-optic sensors work according to the energetic principle in which light is emitted via one fiber-optic cable and received via another. The amplifier can be adapted to a wide range of application requirements through the use of flexible plastic fiber-optic cables or glass fiber-optic cables with adapter no. 7. The display shows both the switching threshold and the currently received signal, which means that the sensor can be set up intuitively and quickly using the buttons. More complex parameterizations can be conveniently carried out via the wenglor weCon app on a mobile device or via IO-Link. All sensor information is also provided via the IO-Link process data. Both the fiber-optic cable and the amplifier can be mounted without tools, which further simplifies handling.
