

Laser Distance Sensor

Time of Flight

Y1TA100QXT3S931

Part Number

- 2 mutually independent switching outputs
- Graphical display for easy operation
- Switching output A1 as analog output switchable (0...10 V/4...20 mA)
- Temperature drift eliminable

These sensors have scratch-resistant optics and the emitted light can be switched off. They use the transit time measurement principle to measure the distance between the sensor and the object. For this reason, the object's color, shape and surface characteristics have practically no influence on measurement results. Even dark objects can be reliably recognized.
