1.7.4. Set Switching Point	8
1.7.5. Read Out Sensor Version	8
1.7.6. Read Out Sensor ID	8

1. Serial interface

The sensors can be addressed by means of the V24 protocol. The teach-in input serves as an RxD line and the switching output is used as a TxD line.

The interface must be set to 9600 baud, N, 8, 1.

1.1. TxD Line

The switching output is implemented as a positive switching output to +Uop (PNP version). The A232 Adapter Box must be interconnected for direct connection to the PC. The adapter box is unnecessary in the event of direct connection to a PLC input.

1.2. RxD Line

The teach-in input (pin 2) serves as an RxD line.

Detection of logic 1 at input Pin2:: UPin2 = +8V..Uop

Detection of logic 0 at input Pin2:: UPin2 = 0V..3V

1.3. Transmission Format

A pause of greater than 300 ms must be included between all transmitted characters.

All characters are transmitted in ASCII format.

All data values are transmitted as ASCII characters in hexadecimal format.

1.4. Checksum Calculation

The checksum is generated via an EXOR link to the frame, beginning with the start byte and ending with the last character of the user data.

Example:

/	2Fh	=	0010 1111	
0	30h	=	0011 0000	
	XOR	=	0001 1111	
2	32h	=	0011 0010	
	XOR	=	0010 1101	
0	30h	=	0011 0000	
	XOR	=	0001 1101	
D	44h	=	0100 0100	
	XOR	=	0101 1001	
0	30h	=	0011 0000	
	XOR	=	0111 1001	
0	30h	=	0011 0000	
	XOR	=	0101 1001	→
				checksum = 59h

1.5. Commands

1.5.1. Teach-In

<p>Query:</p> <p>/02 0T 00 49. = Normal NO /02 0T 01 48. = Normal NC /02 0T 02 4B. = Minimal NO /02 0T 03 4A. = Minimal NC /02 0T 04 4D. = Maximal NO /02 0T 05 4C. = Maximal NC /02 0T 10 48. = Poti -1 /02 0T 11 49. = Poti +1 /02 0T 12 4A. = Poti -16 /02 0T 13 4B. = Poti +16</p>	<p>Response:</p> <p>/07 0M T PP MM VVVV CC.</p> <p>PP=PotMax 1=potentiometer full 0=potentiometer not full</p> <p>MM=mode</p> <p>VVVV=potentiometer value (absolute value, CalibMin value)</p> <p>CC=checksum</p>
--	--

1.5.2. Execute Sensor Reset

Query:	Response:
/00 0R 4D.	/02 0R OK 4B.

1.6. Process

1.6.1. Read Out Distance Value

Query:	Response:
/000D5B.	<p>/0C 0D VVVV SSSS XX YY CC.</p> <p>example: /0C0D0F320765020059.</p> <ul style="list-style-type: none">▶ VVVV = potentiometer value (absolute value, CalibMin value)▶ SSSS = threshold (threshold = absolute value - CalibMin value)▶ XX = output state▶ YY = PotMax 00 = threshold in the range 01 = upper or lower threshold at limit stop

1.7. Settings

1.7.1. Adjust On and Off-Delay

Query	Response:
/04 0A AA BB CC. <ul style="list-style-type: none">▶ AA = on-delay * 5 ms▶ BB = off-delay * 5 ms▶ CC = checksum	/010MA12

1.7.2. Read Out Sensor Configuration

Query	Response:
/000g78.	<p>/1C 0g SSSS MM NN OO PP RR SSSS TT UU VVVV WW CC.</p> <ul style="list-style-type: none">▶ SSSS = relative threshold▶ MM = polarity▶ NN = mode▶ OO = on-delay▶ PP = off-delay▶ RR = language▶ SSSS = standard range▶ TT = GAIN▶ UU = „00“▶ VVVV = don't care (insert „00“);▶ WW = for internal use (valid checksum)▶ CC = checksum

1.7.3. Change Sensor Configuration

Query	Response:
<p>From version 6 upwards:</p> <p>/1C 0G SSSS MM NN OO PP RR SSSS TT UU VVVV WW CC.</p> <ul style="list-style-type: none"> ▶ SSSS = relative threshold Min:0 Max: (3000) ▶ MM = polarity 0=NO 1=NC ▶ NN = mode 0=Normal 1=Minimal 2=Maximal ▶ OO = on-delay [x 5ms] Min: 0 Max: 200 ▶ PP = off-delay [ms] Min: 0 Max: 200 ▶ RR = language 0: Deutsch 1: Englisch ▶ SSSS = NormRange ▶ TT = GAIN ▶ UU = „00“ ▶ VVVV = don't care (insert „0000“); ▶ WW = don't care (insert „00“); ▶ CC = Checksum 	<p>/01 0M G CC.</p> <p>CC = checksum</p>
<p>From version 2 upwards:</p> <p>/1E 0G SSSS MM NN OO PP RR SSSS TTTTTTTT FF CC.</p> <ul style="list-style-type: none"> ▶ SSSS = Relative threshold Min:0 Max: NormRange (1000) ▶ MM = Polarity 0=NO 1=NC ▶ NN = Teach-Mode 0=Normal 1= Minimal 2=Maximal ▶ OO = On Delay [x 5ms] Min: 0 Max: 200 ▶ PP = OffDelay [ms] Min: 0 Max: 200 ▶ RR = Language 0: German 1: English ▶ SSSS = NormRange (default 1000) ▶ TTTTTTTT = Unit Bsp. „44494700“ = „DIG“ ▶ FF = don't care (insert „00“); ▶ CC = Checksum <p>Version 1:</p> <p>/14 0G SSSS MM NN OO PP RR SSSS FF CC.</p>	

1.7.4. Set Switching Point

Query	Response:
/04 0S SSSS CC.	/010MS00.
<ul style="list-style-type: none"><li data-bbox="147 269 540 296">▶ SSSS = threshold (threshold = absolute value - CalibMin value)<li data-bbox="147 296 540 296">▶ CC = Checksum	

1.7.5. Read Out Sensor Version

Query	Response: /000V49. /07 0V 8A: GG TT CC. ► A = software version ► GG = sensor group 19 ► TT = sensorTyp 00 oder 01 ► CC = checksum
-------	---

1.7.6. Read Out Sensor ID
